PROFESSIONAL SUMMARY

As a software engineer with a background in sales, I have a unique understanding of both technical solutions and customer needs. Specializing in developing high-quality, efficient code that drives business growth, I bring a meticulous attention to detail, a team oriented mindset, and a commitment to continuous learning to every project I work on. My ultimate goal is to help tech companies build innovative and impactful products that drive growth and success.

Projects:

Pacman: An emulation of the classic game, with functional AI, collision detection, and win conditions. Created just using raw JS, html canvas.

SlackOverFlow: A python django website designed as a forum for devs to go to submit questions and get expert solutions.

Onyx Gaming: A MERN project, it provides a simple system to match up users and provide live chats between them in order to bring gamers together

Professional Experience:

General Assembly, Remote:

Software Immersive Apprentice: Feb 2023-May 2023.

Worked tirelessly to refine my software engineering skills, learning multiple frameworks in both Python and Javascript and applying them to real-world coding projects to ensure I was job ready by graduation.

- I led every collaborative project I worked on, ensuring proper organization using trello boards, ERD's and wireframes.

GetSales, Austin, TX

Inside Sales Team Lead: Feb 2021-Feb 2023.

Managing and coaching a sales team to perfect their phone conversations with potential DoorDash drivers, guiding them to complete their first delivery.

- Managed and coached a top performing team of 10 sales reps by providing structure and coaching
- Supported new company hires in improving results, and was trusted to assist them in their first exposures to live sales calls.
- Promoted from Inside Sales Rep II after 7 months
- Promoted from Inside Sales Rep I after 11 months
